

## AeroGarden Cannabis Growing Setup Checklist

- Choose a compatible AeroGarden model (Bounty or Farm series recommended)
- Purchase autoflower cannabis seeds (Lowryder, White Widow Auto, etc.)
- Clean and sanitize the AeroGarden unit before use
- Fill the water reservoir with filtered water
- Add cannabis-specific hydroponic nutrients to the reservoir
- Check and adjust water pH to 5.5 to 6.5
- Germinate seeds in AeroGarden sponges or paper towel method
- Insert sprouted seeds into one grow pod (do not overcrowd)
- Adjust LED grow light to highest setting to start
- Maintain 18 to 24 hour light schedule (AeroGarden default is fine)
- Monitor water levels and top off with nutrients as needed
- Apply low-stress training (LST) if the plant becomes too tall
- Switch to bloom nutrients when flowering begins
- Watch for signs of trichome maturity to know when to harvest
- Trim and hang buds to dry in a dark, ventilated area
- Cure dried buds in airtight jars for 1 to 2 weeks
- Enjoy your homegrown weed responsibly and legally!
